## Department of Computer Science and Engineering University of Rajshahi Sample Question

Course Title; Database Management System marks:52.5

Course code: CSE- 3121 Full

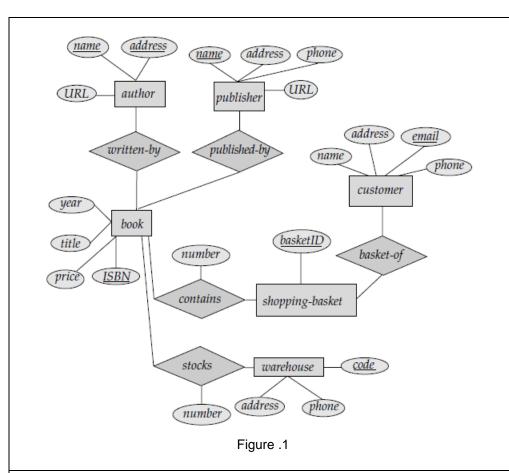

Time: 3 Hours

## [Answer three questions from each part]

## Part A

Consider the E-R diagram in Figure 1, which models an online bookstore.  Derive the table(s) for relationship set and entity set from Figure 1. Suppose the bookstore adds music cassettes and compact disks to its collection. The same music item may be present in cassette or compact disk format, with differing prices. Extend the E-R diagram to model this addition (for simplicity, you may ignore the effect on shopping baskets).  2(a) Express the operation of Deletion, Insertion and updating in relational algebra.  3		1 att A	
Derive the table(s) for relationship set and entity set from Figure 1. Suppose the bookstore adds music cassettes and compact disks for its collection. The same music item may be present in cassette or compact disk format, with differing prices. Extend the E-R diagram to model this addition (for simplicity, you may ignore the effect on shopping baskets).  2(a) Express the operation of Deletion, insertion and updating in relational algebra.  3 A relation s is given in Figure 2 and another relation r is given in Figure 3. Find the r÷s, show output of each 5.75 operation (Natural join, Projection etc) involved in r∗s.  3(a) What are tests those must be made in order to preserve the following referential integrity constraint ∏ <sub>In</sub> (r₂) 2 ⊆ ∏ <sub>K</sub> (r₁) for Insert and Update operation.  (b) Given the relations: branch (branch_name, branch_city, assets), customer (customer_name, customer_street, customer_city, account (account_number, branch_name, balance), loan (loan_number, branch_name, amount), depositor (customer_name, account_number), borrower (customer_name, loan_number Write relational algebra for the following quarry:  (i) Find all customers who have an account at all branches located in Rajshahi city.  (ii) Find all customers who have an account from at least the 'Rajshahi' and the 'Dhaka' branches.  (c) For the relations given in Figure 4, derives the contents of relations for natural-join, left-outer-join, right-outer-join and full-outer-join.  4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query:  (i) select customer-name from customer  from depositor)  union  (select customer-name, avg (balance)  from account  group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL  (b) What are the different states of transaction? Give some example of non-ACID Transactions.  2 Compare Oracle with MySQL  (c) What are software RAID and hardware RAID? Explain Block-level s	1(a)	Explain the distinctions among the terms primary key, candidate key, and super key.	2
<ul> <li>(b) A relation s is given in Figure 2 and another relation r is given in Figure 3, Find the r÷s, show output of each operation (Natural join, Projection etc) involved in r+s.</li> <li>3(a) What are tests those must be made in order to preserve the following referential integrity constraint ∏<sub>α</sub> (r<sub>2</sub>) 2 ⊆ ∏<sub>κ</sub> (r<sub>1</sub>) for Insert and Update operation.</li> <li>(b) Given the relations: branch (branch_name, branch_city, assets), customer (customer_name, customer_street, customer_city), account (account_number, branch_name, balance), loan (loan_number, branch_name, amount), depositor (customer_name, account_number), borrower (customer_name, loan_number Write relational algebra for the following quarry:  (i) Find all customers who have an account at all branches located in Rajshahi city.  (ii) Find all customers who have an account from at least the "Rajshahi" and the "Dhaka" branches.</li> <li>(c) For the relations given in Figure 4, derives the contents of relations for natural-join, left-outer-join, right-outer-join and full-outer-join.</li> <li>4(a) Compare Oracle with SQL server.</li> <li>(b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query:  (i) select customer-name from borrower)  (iii) select customer-name from depositor)  union  (select customer-name, avg (balance) from account group by branch-name</li> <li>(c) Where and why do you need SQLite?</li> <li>Part-B</li> <li>5(a) Compare Oracle with MySQL</li> <li>(b) What are the different states of transaction? Explain Block-level striping and Bit-level striping in the paper in tran</li></ul>	2(a)	Express the operation of Deletion, Insertion and updating in relational algebra.	3
(b) Given the relations: branch (branch_name, branch_city, assets), customer (customer_name, customer_street, customer_city), account_number, branch_name, balance), loan (loan_number, branch_name, amount), depositor (customer_name, account_number), borrower (customer_name, loan_number) Write relational algebra for the following quarry: (i) Find all customers who have an account at all branches located in Rajshahi city, (ii) Find all customers who have an account from at least the "Rajshahi" and the "Dhaka" branches.  (c) For the relations given in Figure 4, derives the contents of relations for natural-join, left-outer-join, right-outer-join and full-outer-join.  4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like "%Main%" (ii) select customer-name from depositor) union (select customer-name from borrower) (iii) select branch-name, avg (balance) from account group by branch-name, c) What are the different states of transaction? Give some example of non-ACID Transactions.  2  Part-B  5(a) Compare Oracle with MySQL  What are the different states of transaction? Give some example of non-ACID Transactions.  2  (b) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an problem or inconstancy that may occur in schedule, 2, and 3, (in Fig. 9, 10 and 11 respectively)  (c) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4			5.75
(b) Given the relations: branch (branch_name, branch_city, assets), customer (customer_name, customer_street, customer_city), account_number, branch_name, balance), loan (loan_number, branch_name, amount), depositor (customer_name, account_number), borrower (customer_name, loan_number) Write relational algebra for the following quarry: (i) Find all customers who have an account at all branches located in Rajshahi city, (ii) Find all customers who have an account from at least the "Rajshahi" and the "Dhaka" branches.  (c) For the relations given in Figure 4, derives the contents of relations for natural-join, left-outer-join, right-outer-join and full-outer-join.  4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like "%Main%" (ii) select customer-name from depositor) union (select customer-name from borrower) (iii) select branch-name, avg (balance) from account group by branch-name, c) What are the different states of transaction? Give some example of non-ACID Transactions.  2  Part-B  5(a) Compare Oracle with MySQL  What are the different states of transaction? Give some example of non-ACID Transactions.  2  (b) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an problem or inconstancy that may occur in schedule, 2, and 3, (in Fig. 9, 10 and 11 respectively)  (c) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4			
customer_street, customer_city), account (account_number, branch_name, balance), loan (loan_number, branch_name, amount), depositor (customer_name, account_number), borrower (customer_name, loan_number Write relational algebra for the following quarry: (i) Find all customers who have an account at all branches located in Rajshahi city. (ii) Find all customers who have an account from at least the "Rajshahi" and the "Dhaka" branches.  (c) For the relations given in Figure 4, derives the contents of relations for natural-join, left-outer-join, right-outer-join and full-outer-join.  4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like "%Main%" (ii) select customer-name from borrower) (iii) select tranch-name, avg (balance) from account group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL (b) What are the different states of transaction? Give some example of non-ACID Transactions.  2  (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig. 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm-scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode? Explain Lock-compatibility matrix. What will happen in	3(a)	· · · · · · · · · · · · · · · · · · ·	2
(c) For the relations given in Figure 4, derives the contents of relations for natural-join, left-outer-join, rightouter-join and full-outer-join.  4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like "%Main%" (ii) select customer-name from depositor) union (select customer-name, avg (balance) from account group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL  (b) What are the different states of transaction? Give some example of non-ACID Transactions.  Part-B  5(a) What are the different states of transaction? Give some example of non-ACID Transactions.  2 (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig. 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm—scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in	(b)	customer_street, customer_city), account (account_number, branch_name, balance), loan (loan_number, branch_name, amount), depositor (customer_name, account_number), borrower (customer_name, loan_number) Write relational algebra for the following quarry:  (i) Find all customers who have an account at all branches located in Rajshahi city.	3
outer-join and full-outer-join.  4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-name from depositor) union (select customer-name from borrower) (iii) select branch-name, avg (balance) from account group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL (b) What are the different states of transaction? Give some example of non-ACID Transactions.  2 (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig. 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm—scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4	(c)		3 75
4(a) Compare Oracle with SQL server.  (b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like '%Main%' (ii) select customer-name from depositor) union (select customer-name from borrower) (iii) select branch-name, avg (balance) from account group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL  (b) What are the different states of transaction? Give some example of non-ACID Transactions.  2 (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm—scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode? Explain Lock-compatibility matrix. What will happen in	(0)		3.73
(b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like '%Main%' (ii) select customer-name from depositor) union (select customer-name from borrower) (iii) select branch-name, avg (balance) from account group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL (b) What are the different states of transaction? Give some example of non-ACID Transactions. 2 (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm—scheduling algorithm? Explain RAID Levels 2 and 3. (b) What are exclusive (X) mode and shared (S) mode? Explain Lock-compatibility matrix. What will happen in 4			
(b) Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query: (i) select customer-name from customer where customer-street like '%Main%' (ii) select customer-name from depositor) union (select customer-name from borrower) (iii) select branch-name, avg (balance) from account group by branch-name  (c) Where and why do you need SQLite?  Part-B  5(a) Compare Oracle with MySQL (b) What are the different states of transaction? Give some example of non-ACID Transactions. 2 (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm—scheduling algorithm? Explain RAID Levels 2 and 3. (b) What are exclusive (X) mode and shared (S) mode? Explain Lock-compatibility matrix. What will happen in 4	4(a)	Compare Oracle with SOL server	2
Part-B  5(a) Compare Oracle with MySQL  (b) What are the different states of transaction? Give some example of non-ACID Transactions.  (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4	_ ` _	Consider the relations given in Figures 5-8, and then derive the contents of the relation found from the following query:  (i) select customer-name from customer where customer-street like '%Main%'  (ii) select customer-name from depositor) union (select customer-name from borrower)  (iii) select branch-name, avg (balance) from account group by branch-name	4.75
5(a) Compare Oracle with MySQL  (b) What are the different states of transaction? Give some example of non-ACID Transactions.  (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4	(c)	Where and why do you need SQLite?	2
5(a) Compare Oracle with MySQL  (b) What are the different states of transaction? Give some example of non-ACID Transactions.  (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4			
(b) What are the different states of transaction? Give some example of non-ACID Transactions.  (c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4			
(c) What will happen if transaction T1 is followed by T2 instead of as described in schedule 1. Explain if there is any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4	5(a)		
any problem or inconstancy that may occur in schedule, 2, and 3. (in Fig, 9, 10 and 11 respectively)  6(a) What are software RAID and hardware RAID? Explain Block-level striping and Bit-level striping? What is an Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4	(b)		1
Elevator Disk-arm—scheduling algorithm? Explain RAID Levels 2 and 3.  (b) What are exclusive (X) mode and shared (S) mode?. Explain Lock-compatibility matrix. What will happen in 4	(c)		4.75
	` '	Elevator Disk-arm–scheduling algorithm? Explain RAID Levels 2 and 3.	
	(b)		4

7(a)	What is Big Data? What are usual techniques to handle Big Data?	2
(b)	Explain the Figure. 13 describing data access from a storage.	3
(c)	When <i>Deferred database modification</i> approach is used, how does log look like at different instances of time for the transactions $T_0$ and $T_1$ ( $T_0$ executes before $T_1$ ): as given in Figure. 14.	3.75
8(a)	For R = (A, B, C), F = {A $\rightarrow$ B, B $\rightarrow$ C), if R is decomposed in (i) R1 = (A, B), R2 = (B, C) and (ii) R1 = (A, B), R2 = (A, C), then explain whether they are Lossless-join decomposition and/or Dependency preserving	2
(b)	If, <b>r</b> in Figure. 15 is decomposed in <b>r1</b> and <b>r2</b> , will it be lossy-join or lossless-join decomposition? Explain your answer.	2
(c)	Given relation schema R = {A, B, C, D, E}. and FDs A $\rightarrow$ BC, CD $\rightarrow$ E, B $\rightarrow$ D, E $\rightarrow$ A, now find out A) <sup>+</sup> , (AB) <sup>+</sup> , (BC) <sup>+</sup> , (ABC) <sup>+</sup> .	2
(d)	The given relational scheme R with attributes A,B,C,D,F and the FDs A $\rightarrow$ BC, B $\rightarrow$ E, CD $\rightarrow$ EF, prove that functional dependency AD $\rightarrow$ F holds in R.	1.25
(e)	Given $F = \{A \rightarrow C, AB \rightarrow C\}$ , prove that B is extraneous in $AB \rightarrow C$ .	1.5
